Methode Electronics is committed to delivering total quality to all of our customers. We challenge ourselves to exceed our customers' requirements and to continuously improve our technology, engineering solutions, products, and services by "Finding a Better Way".

To achieve the highest quality, Methode is fully committed to a "Zero Defect" policy supported by our key systems:

- We manage all new products with a five phase program launch system, Product Development and Program Launch System (PDPLS), to ensure programs are launched flawlessly.
- Our Global Supplier Manual is used to cascade customer requirements down through our partners and suppliers.
- The Methode Production System (MPS) guides all of our processes.

The foundation of our total quality system is ISO9001:2000, ISO/TS16949, ISQ14001, AS9100, ITAR, UL and NADCAP certifications. We have documented management systems in place that are focused on fulfilling our customers' quality requirements, complying with national and international regulations, and environmental standards.

Methode uses Lean and Six Sigma to continually reduce sources of variability to ensure that we improve our competitiveness and deliver the highest quality on time every time.
